
(a) Migration, nearest rounding
realized migration
predicted migration (exact convolution)
K = 7
K = 10
K = 20
filled: Δ ≤ 0.2
hollow: Δ = 0.4
(b) AUC loss, nearest rounding
realized AUC loss (cell mean)
predicted AUC loss
P = 10
P = 20
P = 40
(c) First-order closed form
realized migration
closed form $\kappa_P \Delta \sum_k \hat{\rho}(q_k)$
